Continuation of 11. does NOT place the application in condition for allowance because: The applicant has argued that the prior arts do not teach or suggest the feature of "retrieving the at least one associated webpage associated with each one of the selected plurality of digitally stored objects". However, in Allard, a plurality of sale products (being a plurality of digitally stored objects) are empty webpages; thus the combination of Allard and Yonezawa teach simultaneously displaying together multiple ones of the retrieved webpages in a single display screen (Yonezawa, figure 4). The applicant also argued that the prior arts do not teach or suggest the feature of "scrolled without user action other than a user initiating". It is clear that the claim requires a user's scrolling (to be considered as a user initiating) to scroll the respective one of the plurality of sub-framed arrays. Thus, both Allard and Daughtrey teach the scrolling bars which request user to active for scrolling. Besides, Daughtrey teaches a single webpage including sub-frame arrays as disclosed in figure 3.
